FREE WEBINAR: Getting Started with Church Online

Sharing what we know to help with online worship, Bible studies, and meetings.

Wednesday, March 11, 7pm

A man with a beard and glasses is shown in profile, coughing. A cloud of white virus particles is depicted spreading from his mouth. The background is a dark blue gradient with faint circular patterns and a starry texture.

COVID – 19: PERSON TO PERSON SPREAD

- This usually happens through respiratory droplets - when someone with the virus coughs or sneezes, and you breathe it in.
- Most often, you need to be close to the person (within 6 feet) for it to spread this way.
- It might be possible to get COVID-19 by touching a surface or object that has the virus on it and then touching your own mouth, nose, or possibly your eyes. But this is not thought to be the main way the virus spreads.

COVID- 19, SYMPTOMS

- COVID-19 can cause respiratory illness that ranges from mild to severe or even deadly. The symptoms usually start between 2 to 14 days after you get infected. They include
- Fever
- Cough
- Shortness of breath

Help prevent the spread of respiratory diseases like COVID-19.

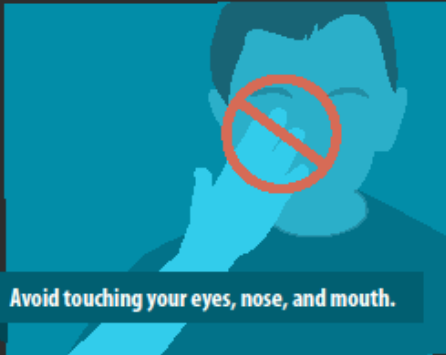

Avoid close contact with people who are sick.

Cover your cough or sneeze with a tissue, then throw the tissue in the trash.

Avoid touching your eyes, nose, and mouth.

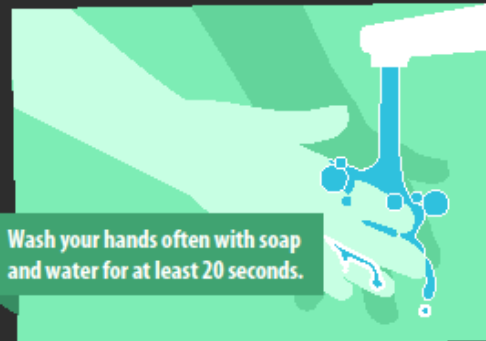

Clean and disinfect frequently touched objects and surfaces.

Stay home when you are sick, except to get medical care.

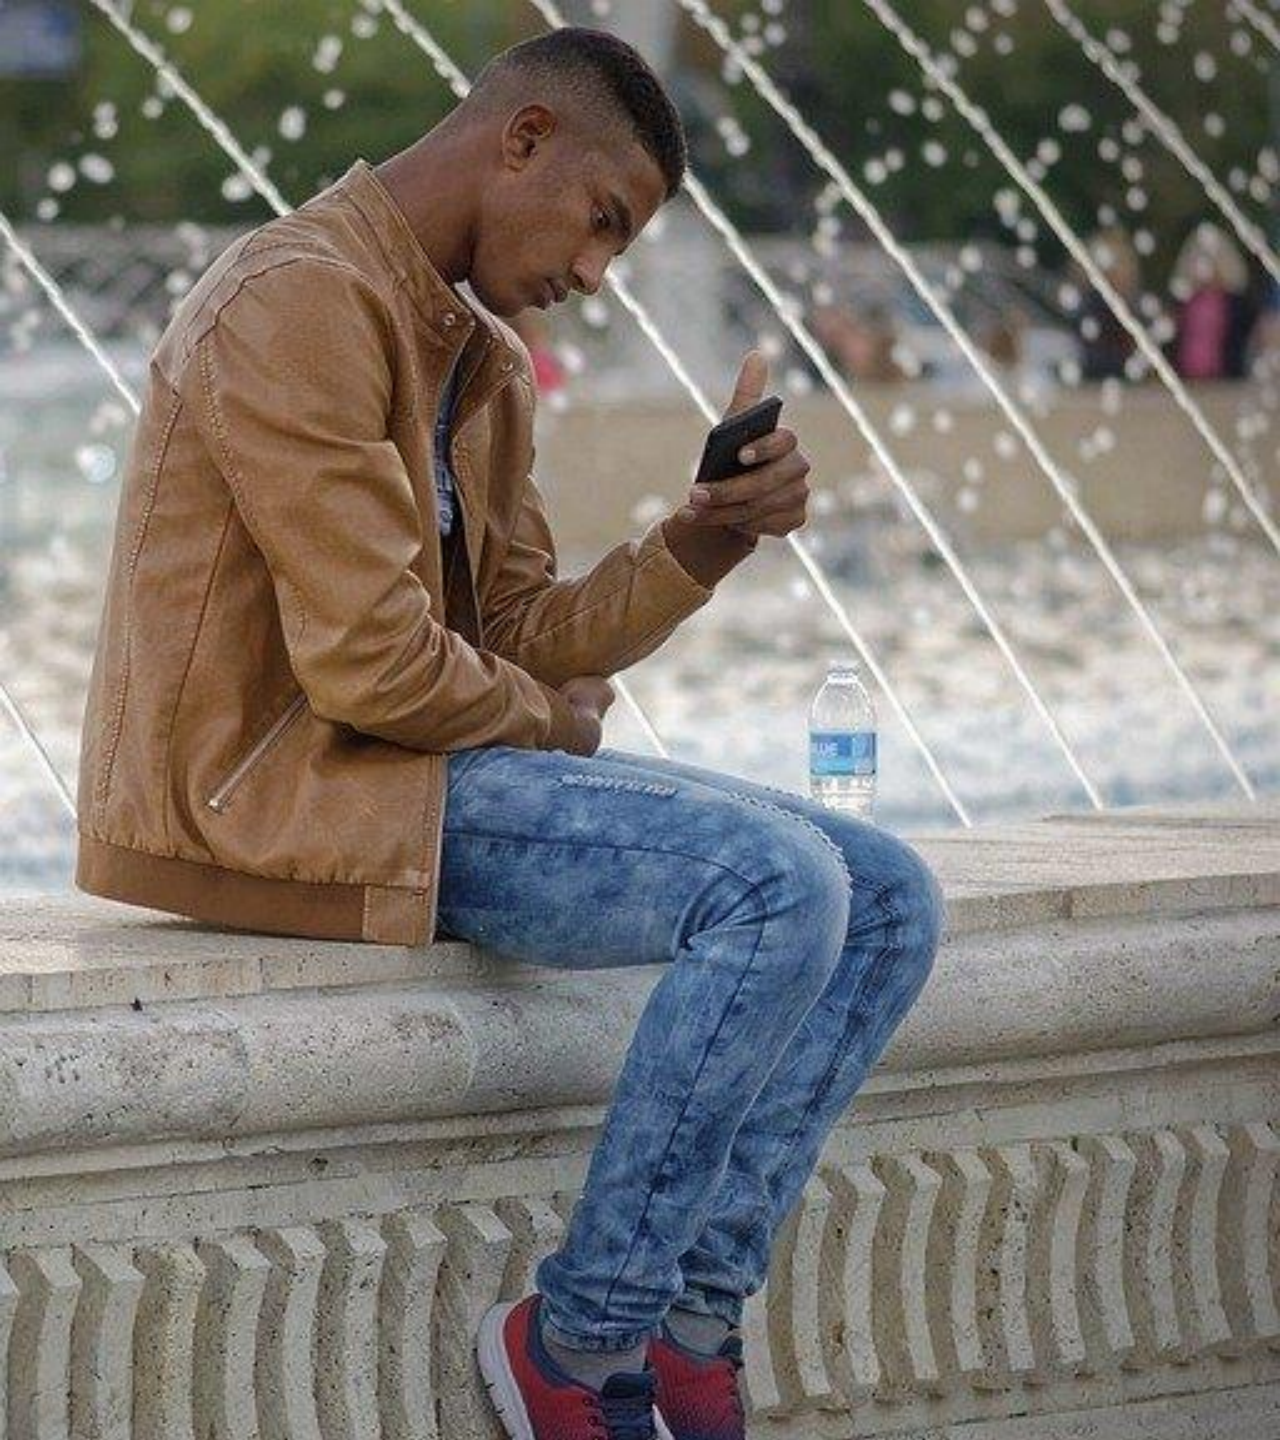

Wash your hands often with soap and water for at least 20 seconds.
